

Oracle® Database

Platform Guide

12c Release 1 (12.1) for Microsoft Windows

E10714-15

January 2017

Copyright © 1996, 2017, Oracle and/or its affiliates. All rights reserved.

Primary Author: Sunil Surabhi

Contributing Author: Lance Ashdown, Reema Khosla

Contributors: Beldalker Anand, Adam Bentley, Ricky Chen, David Collelo, David Friedman, Janelle Simmons, Sue K. Lee, Rich Long, Satish Panchumathy, Ravi Thammaiah, Michael Verheij

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

 Changes in This Release for Oracle Database Platform Guide	xv
Changes in Oracle Database 12c Release 1 (12.1)	xv
 1 Oracle Database Architecture on Windows	
1.1 Overview of Oracle Database on Windows Architecture	1-1
1.1.1 Oracle Automatic Storage Management	1-1
1.1.2 Oracle Automatic Storage Management File Access Control	1-2
1.1.2.1 Creation of New User Groups and Users for Separation of Database Administration Duties 1-2	
1.1.2.2 About Disk Group User Replacement	1-3
1.1.2.3 About Changing File Access Control While the File is Open	1-3
1.1.3 Thread-Based Architecture	1-3
1.1.4 File I/O Enhancements	1-5
1.2 Overview of Oracle Database Scalability on Windows	1-6
1.2.1 Large User Populations	1-6
1.3 Oracle Database Integration with Windows	1-6
1.3.1 Oracle PKI Integration with Windows	1-6
1.3.2 Oracle Services for Microsoft Transaction Server	1-6
1.3.3 Oracle Fail Safe Integration with Windows	1-7
1.4 Other Sources of Information	1-7
 2 Database Tools on Windows	
2.1 Choosing a Database Tool	2-1
2.1.1 Database Tools and Operating System Compatibility	2-1
2.1.2 Preferred Database Tools	2-1
2.2 Starting Database Tools	2-3
2.2.1 Starting Database Tools in Multiple Oracle Homes	2-4
2.2.1.1 Starting Tools from Multiple Oracle Homes	2-4

2.2.2	Running Tools with Windows User Account Control	2-4
2.2.3	Starting Database Tools from the Start Menu	2-5
2.2.4	Starting Database Tools from the Command Line.....	2-6
2.2.5	Starting Windows Tools	2-8
2.3	Using the Oracle Home User Control Tool	2-9
2.4	Using SQL*Loader	2-9
2.4.1	Windows Processing Options	2-10
2.4.1.1	Default (No Processing Option) or "str terminator_string"	2-10
2.4.2	Control File Conventions.....	2-10
2.5	Using Windows Tools	2-11
2.5.1	Using Event Viewer to Monitor a Database	2-11
2.5.2	Using Microsoft Management Console to Administer a Database	2-11
2.5.3	Using Registry Editor to Modify Configuration Information	2-12
2.5.4	Using Task Manager to Monitor Applications and Processes	2-12
2.5.5	Using Local Users and Groups to Manage Users and Groups	2-13

3 Supporting Oracle Home User on Windows

3.1	Managing Oracle Home User.....	3-2
3.2	Using Oracle Home User for Oracle Single-Instance Database and Oracle Database Client.. 3-2	
3.3	Using Oracle Home User for Oracle RAC Database.....	3-3
3.4	Using Oracle Home User for Oracle Grid Infrastructure	3-3
3.5	Using Oracle Home User in Case of Multiple Oracle Home.....	3-3
3.6	Using Oracle Home User During Oracle Database Upgrade.....	3-4
3.7	Converting from Single-Instance Oracle Database to Oracle Real Application Clusters.	3-4

4 Postinstallation Database Creation on Windows

4.1	Overview of the Naming Conventions for Oracle Database.....	4-1
4.2	Overview of Database Creation on Windows Using Oracle Database Configuration Assistant 4-1	
4.3	Overview of Database Creation Tasks on Windows Using Command-Line Tools	4-2
4.3.1	About Exporting an Existing Database	4-3
4.3.1.1	Exporting All Data from an Existing Database	4-5
4.3.2	Deleting Database Files.....	4-5
4.3.3	Modifying the Initialization Parameter File.....	4-5
4.3.4	About Creating and Starting an Oracle Database Service	4-7
4.3.4.1	Creating and Starting an Oracle Database Service	4-7
4.3.4.2	Creating Oracle Wallets in a File System for Oracle Database Services	4-7
4.3.5	Starting an Oracle Database Instance	4-7
4.3.6	Putting the CREATE DATABASE Statement in a Script	4-8
4.3.7	Running the CREATE DATABASE Script	4-8
4.3.8	About Importing a Database.....	4-9
4.3.9	Updating ORACLE_SID in the Registry	4-10
4.3.10	Creating the ORACLE_SID Parameter	4-10
4.3.11	Backing Up the New Database	4-11
4.4	About Administering an Oracle Database Instance Using ORADIM.....	4-12
4.4.1	Creating an Instance Using ORADIM	4-13

4.4.2	Starting an Instance and Services Using ORADIM	4-14
4.4.3	Stopping an Instance and Services Using ORADIM	4-15
4.4.4	Editing an Instance Using ORADIM.....	4-15
4.4.5	Deleting an Instance Using ORADIM	4-16
4.5	Overview of Database Migration from a 32-Bit Windows Computer	4-16
4.5.1	Backing Up a 32-Bit Oracle Database.....	4-16
4.5.2	Migration Considerations.....	4-17
4.5.3	Migrating an Oracle Database 11g Release 2 (11.2) or Earlier Database.....	4-17

5 Postinstallation Configuration Tasks on Windows

5.1	Overview of Windows Firewall.....	5-1
5.1.1	About Oracle Executables Requiring Windows Firewall Exceptions.....	5-1
5.1.1.1	Configuring Windows Firewall Exceptions for Successful Connections to Oracle Software	5-2
5.1.1.2	Overview of Different Executables Added to the Windows Firewall Exception List	5-3
5.1.1.2.1	About Firewall Exceptions for Oracle Database.....	5-3
5.1.1.2.2	About Firewall Exceptions for Oracle Database Examples.....	5-3
5.1.1.2.3	About Firewall Exceptions for Oracle Gateways.....	5-3
5.1.1.2.4	About Firewall Exceptions for Oracle Clusterware and Oracle ASM.....	5-4
5.1.1.2.5	About Firewall Exceptions for Other Oracle Products	5-4
5.1.2	Configuring the Windows Firewall Postinstallation.....	5-4
5.1.3	Troubleshooting Windows Firewall Exceptions	5-5
5.2	About the Need to Reset Passwords for Default Accounts	5-6
5.3	About Windows Authenticated Users.....	5-6
5.4	Overview of NTFS File System and Windows Registry Permissions	5-6
5.4.1	Setting File Permissions	5-6
5.4.1.1	About Default File Permissions Set by Oracle Universal Installer.....	5-7
5.4.1.2	About File Permissions Set by Oracle Database Configuration Assistant	5-7
5.4.1.3	About Setting File System ACLs Manually	5-8
5.4.2	Setting Permissions for Windows Registry Entries	5-8
5.4.3	Setting Permissions for Windows Service Entries	5-8
5.4.4	Setting NTFS File System Security	5-9
5.4.5	Setting Windows Registry Security.....	5-9
5.5	About Configuring External Job Support for the Scheduler.....	5-9
5.6	About Oracle Multimedia on Windows	5-10
5.6.1	Configuring Oracle Multimedia on Windows	5-10
5.7	About Oracle Text on Windows	5-11
5.8	About Oracle Spatial and Graph on Windows.....	5-11
5.8.1	Configuring Oracle Spatial and Graph on Windows Automatically.....	5-12
5.9	About Advanced Replication on Windows	5-12
5.9.1	Checking Tablespace and Rollback Segment Requirements.....	5-12
5.9.2	Adding and Modifying Initialization Parameters	5-13
5.9.3	Monitoring Data Dictionary Tables	5-13

6 Administering a Database on Windows

6.1	About Ways to Manage Oracle Database Services	6-1
6.1.1	Overview of Oracle Database Service Naming Conventions for Multiple Oracle Homes 6-1	
6.1.2	Starting Oracle Database Services	6-2
6.1.3	Stopping Oracle Database Services	6-2
6.1.4	Auto-Starting Oracle Database Services	6-3
6.2	Starting and Shutting Down a Database with SQL*Plus	6-5
6.3	Starting and Shutting Down a Database Using Services	6-6
6.4	Starting Multiple Instances	6-9
6.5	Creating and Populating Password Files	6-9
6.5.1	Viewing and Hiding the Password File	6-10
6.6	Connecting Remotely to the Database	6-11
6.6.1	Connecting to a Database Using SYSDBA Privileges	6-12
6.6.2	Verifying a Remote Database Using Encrypted Passwords	6-12
6.7	About Archiving Redo Log Files	6-12

7 Monitoring a Database on Windows

7.1	Overview of Database Monitoring Tools	7-1
7.2	About Event Viewer	7-1
7.2.1	Using Event Viewer	7-2
7.2.2	Reading Event Viewer	7-3
7.2.3	Managing Event Viewer	7-4
7.3	About Trace Files	7-5
7.4	About Alert Logs	7-5
7.5	Viewing Oracle Database Thread Information	7-6

8 Tuning Windows to Optimize Oracle Database

8.1	Overview of Windows Tuning	8-1
8.2	Overview of Large Page Support	8-2
8.2.1	Granting Lock Pages in Memory Privilege	8-2
8.2.2	Enabling Large Page Support	8-2
8.3	About Reducing Priority of Foreground Applications on Server Console	8-4
8.4	About Configuring Windows Server to Be an Application Server	8-4
8.5	About Disabling Unnecessary Services	8-5
8.6	About the Necessity to Remove Unused Network Protocols	8-5
8.7	About the Necessity to Reset Network Protocol Bind Order	8-5
8.8	Setting the Order of Multiple Network Interface Cards	8-6
8.9	Overview of Latest Reliable Windows Server Service Pack	8-6
8.10	Overview of Hardware or Operating System Striping	8-7
8.10.1	About Multiple Striped Volumes for Sequential and Random Access	8-8
8.11	About Multiplex Windows Server Virtual Memory Paging File	8-8
8.12	Closing All Unnecessary Foreground Applications	8-9

9 Performing Database Backup and Recovery with VSS

9.1	Overview of Database Backup and Recovery with VSS	9-1
-----	---	-----

9.1.1	Purpose of Database Backup and Recovery with VSS	9-1
9.1.2	Scope of This Chapter	9-1
9.1.3	Basic Concepts of Database Backup and Recovery with VSS	9-2
9.1.3.1	Component-Based Shadow Copies.....	9-2
9.1.3.2	Volume-Based Shadow Copies.....	9-2
9.1.3.3	Oracle VSS Backup Types	9-3
9.1.4	Basic Steps of Backup and Recovery with VSS.....	9-3
9.2	About Installing and Uninstalling the Oracle VSS Writer Service	9-4
9.3	About Backing Up a Database	9-5
9.3.1	About Component-Based Backups	9-6
9.3.2	About Backing Up a Database in ARCHIVELOG Mode	9-7
9.3.2.1	Making Component-Based Backups of an ARCHIVELOG Database	9-7
9.3.2.2	Making Volume-Based Backups of an ARCHIVELOG Database	9-7
9.3.3	About Backing Up a Database in NOARCHIVELOG Mode.....	9-8
9.3.3.1	Making Component-Based Backups of a NOARCHIVELOG Database	9-8
9.3.3.2	Making Volume-Based Backups of a NOARCHIVELOG Database	9-8
9.4	About Restoring and Recovering a Database	9-8
9.4.1	About Restoring and Recovering a Database in ARCHIVELOG Mode	9-8
9.4.1.1	Restoring the Server Parameter File	9-9
9.4.1.2	Recovering from the Loss of All Control Files	9-9
9.4.1.3	Recovering Tablespaces or Data Files.....	9-10
9.4.1.4	Recovering All Tablespaces	9-10
9.4.1.5	Performing Disaster Recovery	9-10
9.4.2	About Restoring a Database in NOARCHIVELOG Mode	9-11
9.4.2.1	Restoring Component-Based Backups of a NOARCHIVELOG Database.....	9-11
9.4.2.2	Restoring Volume-Based Backups of a NOARCHIVELOG Database.....	9-11
9.5	About Integrating VSS with Third-Party Requester Applications	9-11
9.5.1	Running Writer Control Commands	9-11
9.5.2	Controlling Commands for Database or All Tablespaces Component.....	9-12
9.6	About Duplicating a Database	9-12
9.6.1	Creating a Nonstandby Database from Shadow Copies	9-12
9.6.2	Creating a Standby Database From Shadow Copies	9-13

10 Authenticating Database Users with Windows

10.1	Overview of Windows Native Authentication.....	10-1
10.2	About Windows Authentication Protocols	10-1
10.3	About User Authentication and Role Authorization Methods	10-2
10.3.1	About Using Authentication and Authorization Methods	10-3
10.4	Overview of Operating System Authentication Enabled at Installation	10-3

11 Administering External Users and Roles on Windows

11.1	Overview of Oracle Administration Assistant for Windows.....	11-1
11.1.1	Managing a Remote Computer.....	11-2
11.1.2	Adding a Computer and Saving Your Configuration.....	11-2
11.1.3	Granting Administrator Privileges for All Databases on a Computer	11-3
11.1.4	Granting Operator Privileges for All Databases on a Computer.....	11-5

11.1.5	Connecting to a Database	11-6
11.1.5.1	Troubleshooting Connection Problems.....	11-8
11.1.6	Viewing Database Authentication Parameter Settings	11-10
11.1.7	Creating an External Operating System User.....	11-10
11.1.8	Creating a Local Database Role	11-15
11.1.9	Creating an External Operating System Role	11-19
11.1.10	Granting Administrator Privileges for a Single Database	11-22
11.1.11	Granting Operator Privileges for a Single Database	11-23
11.2	Overview of Manually Administering External Users and Roles	11-24
11.2.1	About Manually Creating an External Operating System User	11-25
11.2.1.1	Performing External User Authentication Tasks on the Oracle Database Server.....	11-26
11.2.1.2	Performing External User Authentication Tasks on the Client Computer	11-27
11.2.2	Overview of Manually Granting Administrator, Operator, and Task-Specific Privileges for Databases	11-28
11.2.2.1	Running System Privilege Authentication Tasks on the Oracle Database Server	11-29
11.2.2.2	Running System Privilege Authentication Tasks on the Client Computer	11-30
11.2.3	Managing New Users and User Groups	11-30
11.2.4	Overview of Manually Creating an External Role.....	11-30
11.2.4.1	Performing External Role Authorization Tasks on the Oracle Database Server.....	11-31
11.2.4.2	Performing External Role Authorization Tasks on the Client Computer	11-32
11.2.5	About Manually Migrating Users	11-33

12 Storing Oracle Wallets in the Windows Registry

12.1	About Storing Private Keys and Trust Points.....	12-1
12.2	About Storing User's Profile.....	12-1
12.3	About Registry Parameters for Wallet Storage.....	12-1
12.3.1	About Oracle Wallet Manager	12-2
12.3.1.1	Sharing Wallets and sqlnet.ora Files Among Multiple Databases	12-2

13 Oracle PKI Integration with Windows

13.1	About Oracle Public Key Infrastructure	13-1
13.2	About Windows Public Key Infrastructure	13-1
13.2.1	About Microsoft Certificate Stores	13-2
13.2.2	About Microsoft Certificate Services	13-2
13.2.3	Using Microsoft Certificate Stores with Oracle PKI Applications.....	13-2

14 Using Oracle Database with Microsoft Active Directory

14.1	Overview of Microsoft Active Directory Support	14-1
14.1.1	About Microsoft Active Directory	14-1
14.1.2	About Accessing Active Directory	14-1
14.2	Overview of Oracle Components That Integrate with Active Directory.....	14-2
14.2.1	About Directory Naming.....	14-2
14.2.2	About Automatic Discovery of Directory Servers	14-2
14.2.3	About Integration with Windows Tools	14-2

14.2.4	About User Interface Extensions for Oracle Net Directory Naming.....	14-3
14.2.5	About Enhancement of Directory Object Type Descriptions.....	14-3
14.2.6	About Integration with Windows Login Credentials	14-3
14.2.7	Overview of Oracle Directory Objects in Active Directory	14-4
14.3	Overview of Requirements for Using Oracle Database with Active Directory	14-5
14.3.1	Creating Oracle Schema Objects.....	14-5
14.3.2	Creating an OracleContext	14-6
14.3.2.1	Running Oracle Network Configuration Assistant.....	14-7
14.3.3	About Directory Naming Software Requirements	14-8
14.4	Configuring Client Computers and Oracle Database to Use Active Directory	14-8
14.5	About Testing Connectivity	14-9
14.5.1	Testing Connectivity from Client Computers	14-9
14.5.2	Testing Connectivity from Microsoft Tools	14-10
14.6	Overview of Access Control List Management for Oracle Directory Objects	14-13
14.6.1	Overview of Security Groups	14-13
14.6.1.1	About OracleDBCreators.....	14-13
14.6.1.2	About OracleNetAdmins	14-13
14.6.1.3	About Oracle Net Services Objects	14-13
14.6.2	Setting ACLs on Net Service Entries.....	14-14
14.6.3	Adding and Deleting Security Group Members.....	14-14

15 Oracle Database Specifications for Windows

15.1	Initialization Parameter File Overview.....	15-1
15.1.1	About the Location of the Initialization Parameter File.....	15-2
15.1.2	About Editing The Initialization Parameter File	15-2
15.1.3	About Database Configuration Assistant Renaming init.ora.....	15-2
15.2	Using Sample File for Database Creation.....	15-2
15.3	About SGA_MAX_SIZE Parameter.....	15-3
15.4	Overview of Initialization Parameters Without Windows-Specific Values.....	15-3
15.5	Displaying Initialization Parameter Values	15-4
15.6	About Unmodifiable Database Initialization Parameters	15-4
15.7	Calculating Database Limits.....	15-5

16 Configuration Parameters and the Registry

16.1	About Configuration Parameters	16-1
16.2	Registry Overview	16-1
16.3	Registry Parameters Overview	16-2
16.3.1	About HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\KEY_HOMENAME	16-2
16.3.1.1	MSHELP_TOOLS	16-2
16.3.1.2	NLS_LANG and Other Globalization Parameters	16-2
16.3.1.3	ORA_CWD	16-3
16.3.1.4	ORA_SID_AUTOSTART	16-3
16.3.1.5	ORA_SID_PFILE.....	16-3
16.3.1.6	ORA_SID_SHUTDOWN	16-3
16.3.1.7	ORA_SID_SHUTDOWN_TIMEOUT	16-3

16.3.1.8	ORA_SID_SHUTDOWNTYPE.....	16-3
16.3.1.9	ORA_TZFILE.....	16-3
16.3.1.10	ORACLE_AFFINITY.....	16-4
16.3.1.11	ORACLE_BASE	16-5
16.3.1.12	ORACLE_GROUP_NAME	16-5
16.3.1.13	ORACLE_HOME.....	16-5
16.3.1.14	ORACLE_HOME_KEY.....	16-5
16.3.1.15	ORACLE_HOME_USER	16-5
16.3.1.16	ORACLE_HOMENAME	16-6
16.3.1.17	ORACLE_PRRITY	16-6
16.3.1.18	ORACLE_SID.....	16-6
16.3.1.19	OSAUTH_PREFIX_DOMAIN	16-6
16.3.1.20	RDBMS_ARCHIVE	16-6
16.3.1.21	RDBMS_CONTROL	16-6
16.3.1.22	SQLPATH.....	16-6
16.3.2	About HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE.....	16-6
16.3.2.1	INST_LOC	16-7
16.3.3	About HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services	16-7
16.3.3.1	Parameters for Oracle Database Services.....	16-7
16.4	Overview of Oracle RAC Registry Parameters	16-7
16.4.1	About HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\OCR.....	16-7
16.5	About Managing Registry Parameters with Oracle Administration Assistant for Windows. 16-7	
16.5.1	Starting Oracle Administration Assistant for Windows.....	16-8
16.5.2	Adding Oracle Home Parameters	16-9
16.5.3	Editing Oracle Home Parameters.....	16-10
16.5.4	Deleting Oracle Home Parameters.....	16-11

17 Developing Applications for Windows

17.1	About Finding Information on Application Development for Windows	17-1
17.1.1	About Java Enhancements.....	17-1
17.1.2	About ODP.NET	17-1
17.1.3	About Oracle Developer Tools for Visual Studio	17-2
17.1.4	About Oracle Providers for ASP.NET	17-2
17.1.5	About XML Support.....	17-2
17.1.6	About Support for Internet Applications.....	17-2
17.1.7	About Oracle Services for Microsoft Transaction Server.....	17-3
17.1.8	About Oracle Provider for OLE DB	17-3
17.1.9	About Oracle ODBC Driver	17-3
17.1.10	About Pro*C/C++ and Pro*COBOL Applications	17-3
17.2	About Building External Procedures	17-3
17.2.1	External Procedures Overview	17-3
17.2.2	Installing and Configuring Oracle Database and Oracle Net Services	17-4
17.2.2.1	Installing Oracle Database.....	17-5
17.2.2.2	Configuring Oracle Net Services.....	17-5
17.2.3	Writing an External Procedure	17-5
17.2.4	Building a DLL.....	17-6

17.2.5	Registering an External Procedure.....	17-6
17.2.6	Restricting Library-Related Privileges to Trusted Users Only.....	17-8
17.2.7	Executing an External Procedure	17-8
17.3	Overview of Multithreaded Agent Architecture.....	17-9
17.4	About Debugging External Procedures.....	17-9
17.4.1	Using Package DEBUG_EXTPROC	17-9
17.5	About Accessing Text Files with UTL_FILE	17-10

A Storing Tablespaces on Raw Partitions

A.1	Raw Partition Overview	A-1
A.1.1	About Physical Disk	A-1
A.1.2	About Logical Partition.....	A-2
A.1.3	About Physical Disk and Logical Partition Considerations	A-2
A.1.4	About Compatibility Issues.....	A-2
A.2	Configuring Disks for Oracle Automatic Storage Management.....	A-3

B Oracle Net Services Configuration on Windows

B.1	About Configuring Oracle Database to Communicate with Oracle ASM.....	B-1
B.2	About Modifying Oracle Net Services Registry Parameters and Subkeys.....	B-1
B.2.1	About Oracle Net Service Subkeys	B-1
B.3	About Listener Requirements	B-2
B.3.1	Running Oracle Net Services	B-2
B.4	Overview of Optional Configuration Parameters.....	B-3
B.4.1	About LOCAL Parameter	B-3
B.4.2	About TNS_ADMIN Parameter	B-3
B.4.3	About USE_SHARED_SOCKET Parameter.....	B-3
B.5	Overview of Advanced Network Configuration	B-4
B.5.1	About Configuring Authentication Method.....	B-4
B.5.2	About Configuring Security for Named Pipes Protocol	B-4
B.5.3	Modifying Configuration of External Procedures for Higher Security	B-4

C Running Windows Services

C.1	About Windows Services for Oracle Database.....	C-1
C.1.1	Running Windows Services in Oracle Home	C-1
C.1.2	Additional Privileges Required by Oracle Database Services.....	C-2
C.1.3	Granting Additional Operating System Privileges Manually.....	C-3

D Error Messages on Windows

D.1	ORA-09275: CONNECT INTERNAL No Longer Supported.....	D-1
D.2	ORA-15252 to ORA-15266: User Replacement Failure on Windows	D-1
D.3	ORA-15301 to ORA-15302: Failure to Modify Ownership, Group, and Permission of Opened Files D-2

Glossary

Index

Preface

Note:

- Windows Multilingual User Interface Pack is supported on all Windows operating systems.
 - In the 12.1 release, only the database client is supported on 32-bit Windows operating systems.
-
-

This Preface contains these topics:

- [Audience](#)
- [Documentation Accessibility](#)
- [Accessing Documentation](#)
- [Related Documents](#)
- [Conventions](#)

Audience

This guide is intended for database administrators, network administrators, security specialists, and developers who use Oracle Database for Windows.

To use this document, you need:

- Oracle-certified Windows operating system software installed and tested
- Knowledge of object-relational database management concepts

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Accessing Documentation

The Oracle Database Online Documentation Library for Windows is not shipped with Oracle Database for Windows. Everything in the library is available for download from the Oracle Technology Network (OTN) at

<http://www.oracle.com/technetwork/indexes/documentation/index.html>

Related Documents

For more information, see the following documents in the Oracle Database documentation set:

- *Oracle Database Installation Guide for Microsoft Windows*
- *Oracle Database Platform Guide for Microsoft Windows*
- *Oracle Database Concepts*

Many books in the documentation set use the sample schemas of the seed database, which is installed by default when you install Oracle Database. See *Oracle Database Sample Schemas* for information about how these schemas were created and how you can use them yourself.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Changes in This Release for Oracle Database Platform Guide

This preface describes new and deprecated features of Oracle Database and provides pointers to additional information.

Changes in Oracle Database 12c Release 1 (12.1)

The following are changes in *Oracle Database Platform Guide* for Oracle Database 12c Release 1 (12.1).

- [New Features](#)
- [Deprecated Features](#)
- [Desupported Features](#)

New Features

The following features are new in this release:

- Support of Oracle Home User on Windows

Starting with Oracle Database 12c Release 1 (12.1), Oracle Database supports the use of Oracle Home User, specified at the time of installation. Oracle Home User is used to run Windows services for the Oracle home. Oracle Home User is associated with an Oracle home and cannot be changed post installation. On a system, different Oracle homes can share the same Oracle Home User or use different Oracle Home User names.

Oracle Home User can be a Windows built-in account or a Windows User Account. For enhanced security, Oracle recommends that the standard Windows User Account be chosen as the Oracle Home User for Oracle Database installations. The primary purpose of Oracle Home User is to run Windows services with Windows User Account. This user account (Oracle Home User) must be a standard Windows user account (not an Administrator). Windows User Account can be a Local User, a Domain User, or a Managed Services Account.

Note: See the Microsoft documentation for more information on different types of Windows user accounts.

This release has also introduced a new Windows utility called the Oracle Home User Control. This is a command-line tool that displays the Oracle Home User name associated with the current Oracle home and updates the password for the Windows User Account used as Oracle Home User.

- **Oracle ASM File Access Control on Windows**

Oracle Automatic Storage Management (Oracle ASM) File Access Control restricts the access of files to specific Oracle ASM clients that connect as SYSDBA. An Oracle ASM client is typically a database, which is identified as the user that owns the database instance home.

Starting with Oracle Database 12c Release 1 (12.1), Oracle supports the use of standard Windows User Account instead of Local System Account to run Oracle Database services that lets you use separate users for different Oracle databases. This release also supports Oracle ASM disk group file-level access control and privilege separation.

The Oracle ASM File Access Control feature helps to replace the current user with a new user and allows the user to change ownership, group membership, and permissions of a file while the file is open by one or more Oracle ASM clients. This release onwards, the Windows User Accounts used as Oracle Home Users are restricted from directly accessing Oracle ASM storage devices and can be accessed through the Oracle Database services that have sufficient privileges to run that service.

Oracle ASM disk group users now manage ASM disk group user replacement with new ASMCMD commands and SQL statements.

- ["Managing New Users and User Groups" on page 11-30](#)
- ["ORA-15252 to ORA-15266: User Replacement Failure on Windows" on page D-1](#)
- ["ORA-15301 to ORA-15302: Failure to Modify Ownership, Group, and Permission of Opened Files" on page D-2](#)
- *Oracle Automatic Storage Management Administrator's Guide*
- *Oracle Database Installation Guide for Microsoft Windows*

- Oracle Enterprise Manager Database Express 12c

Oracle Database 12c introduces Oracle Enterprise Manager Database Express 12c, a web-based management tool built into Oracle Database without any need for special installation or management. Using Oracle Enterprise Manager Database Express 12c, you can perform basic administrative tasks such as user, performance, memory, and space management. You can also view performance and status information about your database.

See Also:

- *Oracle Database 2 Day DBA*
- *Oracle Database Installation Guide*

- Support of Oracle Home User for Oracle Net Services

Oracle Database 12c supports Oracle Net services such as Oracle Listener, CMADMIN, and CMAN Proxy Listener to run under Oracle Home User account specified during Oracle Database installation. In earlier releases, Oracle Net services ran under the high-privileged, Windows built-in Local System Account (LSA).

See Also:

- ["Running Oracle Net Services" on page B-2](#)
- *Oracle Database Net Services Administrator's Guide*
- *Oracle Database Net Services Reference*

- Securing External Procedures

Starting with Oracle Database 12c Release 1 (12.1), a `LIBRARY` object can be defined using either an explicit path or a `DIRECTORY` object. You can also use the `CREDENTIAL` clause to specify the operating system user.

See Also:

- ["Registering an External Procedure" on page 17-6](#)
- *Oracle Database Security Guide*
- *Oracle Database Concepts*

- Support for Separation of Database Administration Duties

Oracle Database 12c provides support for separation of database administration duties for Oracle Database by introducing task-specific and least-privileged administrative privileges that do not require the `SYSDBA` administrative privilege. These new privileges are: `SYSBACKUP` for backup and recovery, `SYSDG` for Oracle Data Guard, and `SYSKM` for encryption key management.

Deprecated Features

The following feature is deprecated in this release, and might be desupported in a future release:

Windows NTS Authentication Using the NTLM Protocol

The NTS authentication adapter no longer supports the use of the NT LAN Manager (NTLM) protocol to authenticate Windows domain users. Thus the NTS adapter cannot be used to authenticate users in old Windows NT domains or domains with old Windows NT domain controllers. However, local connections and Oracle Database services running as a Windows Local User continues to be authenticated using NTLM. A new client-side `sqlnet.ora` boolean parameter, `no_ntlm` (default value is `FALSE`) allows you to control if NTLM can be used in NTS authentication. When the parameter is set to `TRUE`, NTLM cannot be used in NTS authentication.

See Also: ["About Windows Authentication Protocols"](#) on page 10-1

Desupported Features

The following features previously described in this guide are no longer supported by Oracle. See *Oracle Database Upgrade Guide* for a list of desupported features.

- Oracle Enterprise Manager Database Control
- Oracle COM Automation
- Oracle Objects for OLE
- Oracle Counters for Windows Performance Monitor
- Raw Devices

Oracle Database Architecture on Windows

This chapter describes how Oracle Database architecture takes advantage of some more advanced [services](#) in Microsoft Windows operating systems.

This chapter contains these topics:

- [Overview of Oracle Database on Windows Architecture](#)
- [Overview of Oracle Database Scalability on Windows](#)
- [Oracle Database Integration with Windows](#)
- [Other Sources of Information](#)

1.1 Overview of Oracle Database on Windows Architecture

Oracle Database on Windows is a stable, reliable, and high-performing system upon which you can build applications. Each release of the database provides new platform-specific features for high performance on Windows.

Oracle Database operates the same way on Windows as it does on other platforms. The architecture offers several advantages on Windows, such as:

- [Oracle Automatic Storage Management](#)
- [Oracle Automatic Storage Management File Access Control](#)
- [Thread-Based Architecture](#)
- [File I/O Enhancements](#)

1.1.1 Oracle Automatic Storage Management

Oracle Automatic Storage Management (Oracle ASM) is an integrated file system and volume manager expressly built for Oracle Database files. Oracle ASM provides the performance of raw I/O with the easy management of a file system. It simplifies database administration by eliminating the need for you to directly manage potentially thousands of Oracle Database files. It enables you to divide all available storage into disk groups. You manage a small set of disk groups, and Oracle ASM automates the placement of the database files within those disk groups.

Oracle recommends that you use Oracle ASM instead of raw files to store data files. It provides the performance benefits of raw files with much better manageability. Oracle ASM is available for both single instance and Oracle Real Application Clusters (Oracle RAC) databases.

You can store Oracle Cluster Registry and voting files in Oracle ASM disk groups and store database data files in the data disk group. The voting files and Oracle Cluster Registry are two important components of Oracle Clusterware.

Note:

- You must be logged on either as Administrator or a user name that is a member of the Administrators group.
 - To open Disk Management console, click **Start, Run**, and then enter: `diskmgmt.msc`.
 - Storing data files on raw devices is no longer supported. You must use a file system or Oracle Automatic Storage Management.
 - NFS or Direct NFS cannot be used for Oracle Clusterware files.
-

See Also:

- [Appendix A, "Storing Tablespaces on Raw Partitions"](#)
- *Oracle Automatic Storage Management Administrator's Guide*
- *Oracle Database Administrator's Guide*

1.1.2 Oracle Automatic Storage Management File Access Control

Oracle ASM File Access Control restricts the access of files to specific Oracle ASM clients that connect as `SYSDBA`. An Oracle ASM client is a database, which is identified by the name of the user that owns the database instance home. Oracle ASM File Access Control uses this user name to identify a database. Oracle ASM File Access Control restricts access based on the operating system and effective user identification number of a database owner.

1.1.2.1 Creation of New User Groups and Users for Separation of Database Administration Duties

Oracle Database 12c Release 1 (12.1) provides access control to separate the roles on Windows. With Oracle Database services running under the Oracle Home User account instead of the Local System Account, the Oracle ASM access control feature must be enabled to support role separation on Windows. In previous releases, this feature was disabled on Windows because all Oracle Database services ran under Windows Built-in Local System Account.

The new user groups added in Oracle Database 12c Release 1 (12.1) are `ORA_HOMENAME_DBA`, `ORA_HOMENAME_OPER`, `ORA_HOMENAME_SYSBKUP`, and so on. For Oracle ASM administration, new groups `ORA_ASMADMIN`, `ORA_ASMDBA` and `ORA_ASMOPER` are automatically created and populated during Oracle Database installation. The Oracle ASM administrator can manage these Windows groups using Windows tools, though you must ensure that the required user names are not removed from these groups.

See Also:

- ["Managing New Users and User Groups"](#) on page 11-30
- *Oracle Database Installation Guide for Microsoft Windows*
- *Oracle Grid Infrastructure Installation Guide*

1.1.2.2 About Disk Group User Replacement

Starting with Oracle Database 12c Release 1 (12.1), the identity of an Oracle ASM user can be changed from one operating system user to another operating system user. It enables end users to change the identity of an Oracle ASM user without having to delete and re-create the user, which requires dropping all the files a user owns. This feature improves the manageability of Oracle ASM users and the files they own. A new SQL Statement (`ALTER DISKGROUP REPLACE USER`) and a new ASMCMD command (`rpusr`) have been added to support user replacement in a disk group.

See Also: *Oracle Automatic Storage Management Administrator's Guide*

1.1.2.3 About Changing File Access Control While the File is Open

Oracle Database 12c Release 1 (12.1) enables users to change the ownership, permissions, or group membership of a file even while the file is open. Since this release, the ASMCMD file access control commands, such as `chgrp`, `chmod`, and `chown`, can run even while the file is open. The SQL statements, such as `ALTER DISKGROUP MODIFY USERGROUP` commands have also been modified as these SQL statements provide support for these ASMCMD commands.

See Also: *Oracle Automatic Storage Management Administrator's Guide*

1.1.3 Thread-Based Architecture

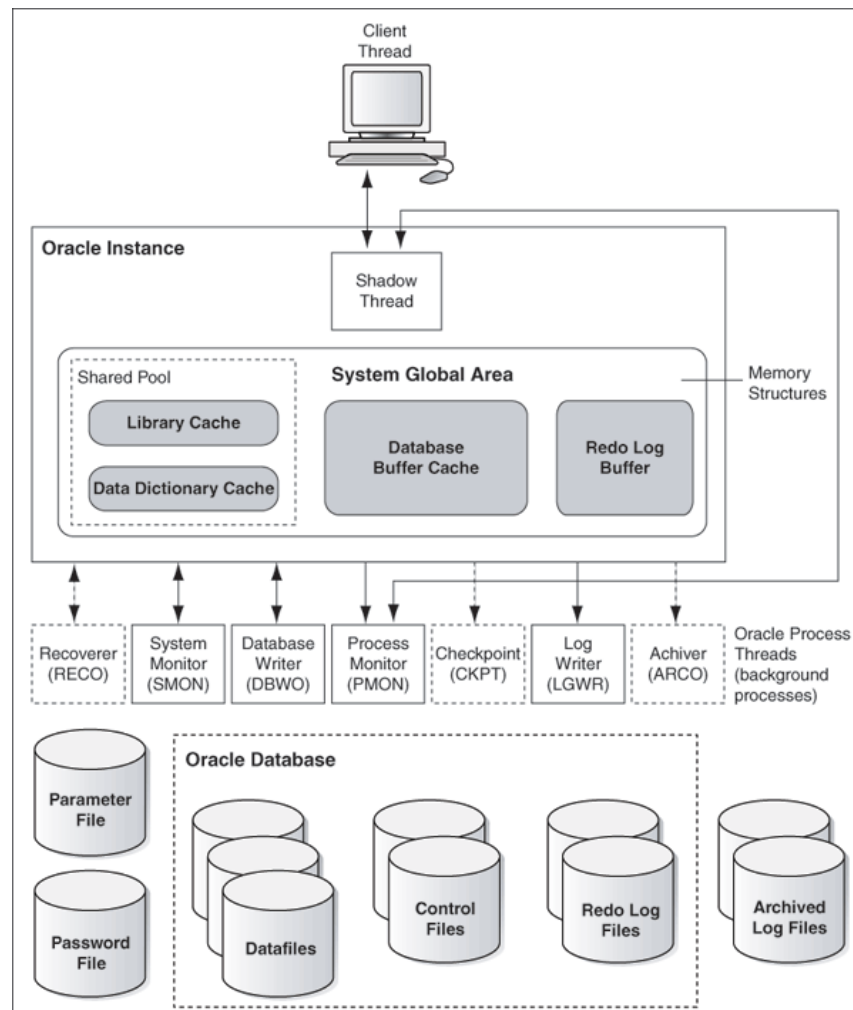

The internal **process** architecture of Oracle Database is **thread**-based. Threads are objects within a process that run program instructions. Threads allow concurrent operations within a process so that a process can run different parts of its program simultaneously on different processors. A thread-based architecture provides the following advantages:

- Faster context switching
- Simpler **System Global Area** allocation routine, because it does not require use of shared memory
- Faster spawning of new connections, because threads are created more quickly than processes
- Decreased memory usage, because threads share more data structures than processes

Internally, the code to implement the thread model is compact and separate from the main body of Oracle Database code. Exception handlers and routines track and deallocate resources. They add robustness, with no downtime because of resource leaks or program that does not function as expected.

Oracle Database is not a typical Windows process. On Windows, an Oracle Database or Oracle Automatic Storage Management **instance** (threads and memory structures) is a Windows service: a background process registered with the operating system. The service is started by Windows and requires no user interaction to start. This enables the database to open automatically at computer startup.

When running multiple Oracle Database or Oracle Automatic Storage Management instances on Windows, each instance runs its own Windows service with multiple component threads. Each thread might be required for the database to be available, or it might be optional and specific to certain platforms. The background processes read and write from various data files, depending on your configuration. Oracle Database architecture on Windows is illustrated in [Figure 1-1](#). Examples of Oracle Database required threads on Windows are listed in [Table 1-1](#).

Figure 1–1 Oracle Database Architecture on Windows

Oracle Database architecture on Windows. An Oracle instance is shown as a Windows service (a background process registered with the operating system). The service is started by Windows and requires no user interaction to start. It contains the memory structures and threads needed to access the database.

The client connects through a **shadow thread** to the Oracle instance. The **shadow thread** connects directly with the **process monitor**. The memory structures include a shared pool of a **library cache** and a **data dictionary cache**, a **database buffer cache**, and a **redo log buffer**.

The threads include the **database writer**, **log writer**, **process monitor**, **system monitor**, **checkpoint process**, **distributed recovery process** (all required while the database is available), and **archive process** (optional while the database is available).

There is an Oracle Database containing **data files**, **control files**, and **redo log files**. Associated with the database is the **parameter file**, **password file**, and **archived log files**.

Table 1–1 Oracle Database Threads

Oracle Database Thread	Description	Required/Optional
DBWO	database writer	Required
LGWR	log writer	Required
MMAN	memory manager process	Required
PMON	process monitor	Required
PSPO	process spawner process	Required
SMON	system monitor	Required
CKPT	checkpoint process (thread on Windows) that runs by default on Windows	Required
ARCO	archive process (or thread on Windows)	Required
RECO	distributed recovery background process	Required

Note: You can view running background processes by entering the following query:

```
SQL> select * from v$bgprocess where paddr <> '00';
```

Oracle Database for Windows is supplied as a set of executables and dynamic link libraries (DLLs). Executable images can be modified using ORASTACK to change the size of the stack used by the threads of the Oracle Database process. Oracle recommends that you use this tool only under the guidance of Oracle Support Services.

1.1.4 File I/O Enhancements

Oracle Database supports 64-bit file I/O to allow use of files larger than 4 gigabytes (GB). In addition, physical and logical raw files are supported as data, log, and **control files** to support Oracle Real Application Clusters (Oracle RAC) on Windows and for those cases where performance must be maximized.

Starting with Oracle Database 11g, instead of using the operating system kernel NFS client, you can configure Oracle Database to access NFS V3 servers directly using an Oracle internal Direct NFS client. Through this integration, Oracle can optimize the I/O path between Oracle and the NFS server, resulting in significantly superior performance. In addition, Direct NFS client simplifies and optimizes the NFS client configuration for database workloads.

Volumes mounted through CIFS cannot be used for storing Oracle database files without configuring the Direct NFS client. The atomic write requirements needed for database writes are not guaranteed through the CIFS protocol. Consequently, CIFS can be used only for operating system-level commands such as, copy, move, and so on.

The Direct NFS client currently supports up to four parallel network paths to provide scalability and high availability. The Direct NFS client delivers optimized performance by automatically load balancing requests across all specified paths. If one network path fails, then the Direct NFS client resends commands over any remaining paths ensuring fault tolerance and high availability.

A new parameter called `dnfs_batch_size` has been added starting with Oracle Database 12c Release 1 (12.1) to control the number of asynchronous I/O operations

that can be queued by an Oracle process when the Direct NFS client is enabled. Set this parameter only if the Direct NFS client is overwhelming the NFS server or the network. This parameter helps the user to manage the load that the Direct NFS client can generate. In typical environments, you must not set this parameter. The default value of this parameter is 4096. To reduce the Direct NFS client load, Oracle recommends a value of 128 that can be changed based on the NFS server performance.

See Also: Your vendor documentation to complete NFS configuration and mounting

1.2 Overview of Oracle Database Scalability on Windows

Features in Oracle Database and in the Windows operating system work together to help increase scalability, throughput, and database capacity. One of the feature has been explained below.

1.2.1 Large User Populations

Several features allow Oracle Database to support an increasingly large number of database connections on Windows:

- The **Shared Server Process**, limits the number of threads needed in the Oracle Database process and supports over 10,000 simultaneous connections to a single database instance.
- **Oracle Net** multiplexing and connection pooling features allow a large configuration to connect more users to a single database instance.
- Oracle RAC raises connection counts dramatically by allowing multiple server computers to access the same database files, increasing the number of user connections by tens of thousands while increasing throughput.

Note: Oracle RAC is only supported on 64-bit Windows server operating systems.

1.3 Oracle Database Integration with Windows

Oracle Database is increasingly integrated with Windows, easing maintenance, and improving enterprise-level deployment in security, directory, and transaction services. Integration features in Oracle Database include:

- **Oracle PKI Integration with Windows**
- **Oracle Services for Microsoft Transaction Server**
- **Oracle Fail Safe Integration with Windows**

1.3.1 Oracle PKI Integration with Windows

Oracle Advanced Security includes **Oracle PKI** (public key infrastructure) integration for authentication and single sign-on. You can integrate Oracle-based applications with the PKI authentication and encryption framework, using Oracle Wallet Manager.

1.3.2 Oracle Services for Microsoft Transaction Server

Microsoft Transaction Server (MTS) is used in the middle tier as an application server for **COM** objects and transactions in distributed environments. Oracle Services for

Microsoft Transaction Server allows Oracle Database to be used as a resource manager in Microsoft Transaction Server-coordinated transactions, providing strong integration between Oracle solutions and Microsoft Transaction Server. Oracle Services for Microsoft Transaction Server can operate with Oracle Database running on any operating system.

Oracle Database takes advantage of a native implementation and also stores [recovery](#) information in Oracle Database itself. Oracle Services for Microsoft Transaction Server allows development in all industry wide data access interfaces, including [Oracle Call Interface](#) (OCI), ActiveX Data Objects (ADO), OLE DB, and Open Database Connectivity (ODBC). The Oracle APIs, Oracle Data Provider for .NET and OCI, offer greatest efficiency.

1.3.3 Oracle Fail Safe Integration with Windows

Oracle Fail Safe ensures that Oracle Database (and also other Oracle and third-party applications) can be configured and managed for high availability on Windows clusters. An instance runs on only one node at a time.

A cluster is a group of independent computing systems that operates as a single virtual system, eliminating individual host systems as points of failure. Oracle Fail Safe works with Microsoft Windows Failover Clusters to ensure that if a failure occurs on one cluster system, then workloads running on that system fail over quickly and automatically to a surviving system. Oracle Database combined with Oracle Fail Safe on a Windows cluster ensures protection from both hardware and software failures.

For well-configured solutions, Oracle Fail Safe ensures a surviving system to be operational in less than a minute, even for heavily used databases.

Note: Windows server operating systems support the clustering technology. The Oracle Fail Safe Manager client can be installed on Windows Server operating systems (such as Windows Server 2008, Windows Server 2008 R2, Windows Server 2012, and Windows Server 2012 R2 x64) and on client systems (such as Windows 7, Windows 8, and Windows 8.1).

See Also: The Oracle Fail Safe documentation set, which is available on separate media in the Oracle Database media pack

1.4 Other Sources of Information

See the following sources for additional information:
